GENERAL CATALOGUE

MOTIVE POWER BATTERIES

INTRODUCTION

Western Electrical DZM battery series is specially designed for motive power applications, i.e. electric bikes/scooters, electric tricycles, electric motorcycles and other device require deep cycle power source. By adopting the most advanced battery technologies, these batteries are feature with great ability of long cycle life, large current discharge capability, reliability and eco-friendly.

This light weight battery series is functional and safe. It is valve regulated which makes it impossible to spill, and with its tightly sealed construction, it can be operated from any angle. With its hard plastic case, it can take severe amounts of high impact and not do any damage. It even has a low pressure safety release valve. This battery will last a long time both physically and chemically.

APPLICATION

- Electric Bikes/Electric Scooters.
- Electric Motorcycles.
- Electric Tricycles.
- Electric Tools, i.e. electric sweeper, electric cooler/heater, etc.
- Other electric devices require DC power supply.

STANDARDS

- IS09001, IS014001
- GB/T-28001
- CE, ROHS
- GB/T221999-2008,
- GB/T18332.1-2009.

FEATURES & BENEFITS

Cold temperature performance Impressive cold cranking performance

Ready to use No need for preparation, just plug and play

Robust brass terminals For enhanced electrical and mechanical performance

Heat resistance Heat temperature resistance up to 70°C

Lighter weight Perfect application for racing, off-road and heavy bikes

INTRODUCTION

Western Electrical EVF battery range is a high performance deep cycle gel battery range that similar to the DZM range but with special design to suit various types of Electric Vehicles that requiring larger capacity than the DZM battery range.

The EVF battery rang is a closed, valve regulated lead battery with gel electrolyte. The imbedding of the electrolyte in a gel prevents leaks and the problem of acid stratification. And by using recombination technology, the life of the battery remains unaffected by water losses. The sealed battery system prevents electrolyte leakage and minimum self-discharge means that the EVF battery range can be stored for longer periods than standard lead-acid batteries.

APPLICATION

- Electric vehicles, i.e. electric car, tricycles, etc.
- Low speed road vehicles, i.e. golf cart, electric resort car, etc.
- Electric engineering machines, i.e. forklift, lifting platform, sweeper, scraper, etc.
- Renewable energy storage system.
- Other devices require DC power supply

STANDARDS

- IS09001, IS014001
- GB/T-28001
- CE. ROHS
- GB18332.1-2009,QC/T 742-2006

FEATURES & BENEFITS

• Extra Long Life:

Western Electrical EVF battery range is designed with high quality grid alloy enables the grid with features of anti-corrosion, low gas emission and excellent deep cycle performance, as well as high density and special deep cycle lead paste prescription is adopted to ensure extra long cycle life. The cycle life may reach over 600 cycles @ 80% DOD.

• High Reliability and Safety:

High strength ABS battery container and lid, perfect safety valve design, and high strength & excellent large current electro conductivity copper terminal design are adopted to ensure this battery range with high reliability and safety at extreme condition.

• High Environmental Adaptability:

Western Electrical EVF battery range adopts special fumed silica Gel in electrolyte and special Gel type separator to prevent electrolyte sratification, which significantly improved the battery's service life and environmental adaptability.

• Non-Cadmium Design, Environment-friendly:

By adopting the container formation without cadmium production technology, which is in the leading position in the industry. It helps to save energy 28.5%, save water 90%, and non-discharge of waste water.

First choice for efficient fuel-saving driving, the green power for the world!

Specially designed for electric rickshaws, the EVG battery series is the answer to the e-rickshaw owner that requires a steady and continuous power source. Combine with the special tubular technology with years of experience in the battery manufacturing, this superior battery series was engineered to guarantee enormous power, durability and safety to meet the severe operating conditions.

As a semi-traction battery, this EVG battery series is not only just play a role for starting but also acts as a fuel for the same, which require its capacity and unique features to ensure its reliability in application, prevent plate shedding during strenuous vibration, extend in service life and make sure the continuously power output, which all further lead to better savings for the e-rickshaw owner.

FEATURES

- Low antimony design for lead alloys grid and plate reduce the corrosion and the rate of maintenance frequency.
- Correctly balanced active materials ensure long life & continuously power output performance.
- High pressure die casted spine grids for tubular positive plates to reduce early corrosion failures rate.
- Superior woven tubular gauntlets for tubular plates to prevent the rupture of plate active material, ensure the excellent deep cycling and quick power recovery ability.
- Specially fire safe vent plugs with ceramic inserts to trap water loss end ensure handling safety.
- High conductive anti corrosion terminals with corrosion resistant bolts.

BENIFITS

Cranking Efficiency A perfect blend of the grid structure and plate

chemistry ensures higher cranking power.

Specially engineered with flame arresters at venting locations to ensure high-level safety.

Low Maintenance Special designed to reduce water loss and the rate

Robust grid and special tubular plates offer long life and excellent deep cycle ability.

Vehicles for hire, like three wheeler auto-rickshaws that require frequent start stop functionality and the ability to travel through rough roads and the complex traffic situation, which need their batteries that offer reliable starting power, long lasting performance and the capability for the daily runs and quick start in city traffic.

Specially designed and improved for three wheeler auto-rickshaws application, Western Electrical EVT series three wheeler battery come with more cranking amps and higher amp-hour capacity to deliver reliable starting power, optimized structure for protection from corrosion & vibrations, and the unique grid design to lower internal resistance and enhance the fast re-charging ability.

BENIFITS

Faster Cranking Designed perfectly to start your engine every time, anvwhere.

Low Maintenance

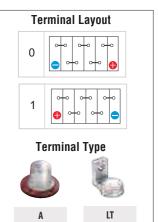

Special designed to reduce water loss and the rate of maintenance frequency.

All Weather Performance

Designed to meet extreme hot and cold weather operation.

Designed For Long Life

Robust grid and special tubular plates offer long life and excellent deep cycle ability.

INTRODUCTION

If there is one thing we should know about the golf cart, that it's battery must be able to deliver consistent power day in and day out.

Engineered specifically to handle the rigors of continuous discharge and recharge, and with the clear purpose to deliver superior power supply, durability and reliability, the EV battery series is manufactured by utilize the highest quality components, higher-density active material plates and optimized internal current flow design to enable them to withstand the stresses of deep cycling and meet the challenges of the toughest, hilliest courses in the battery world, no matter it's for golf cart, utility vehicle and lowspeed passenger vehicle, as well as hunting buggies.

TECHNICAL

- The battery consists of high-performance paste plate, compound low resistance separators, high-impact resistant polypropylene plastic tank.
- Positive plates of lead-based alloy with multiple, highdensity lead paste processing, manufacturing, corrosion resistance, high-rate discharge capacity, good durability.
- Negative plates with a special formulation and double paste process, excellent low temperature discharge, charge acceptance ability, anti-sulfate and anti-offperformance.
- Tight assembly, through partition connectors, discharge stable, safe and reliable.
- Adaptability to temperature range from -40°C to 60°C under normal use.

TECHNICAL

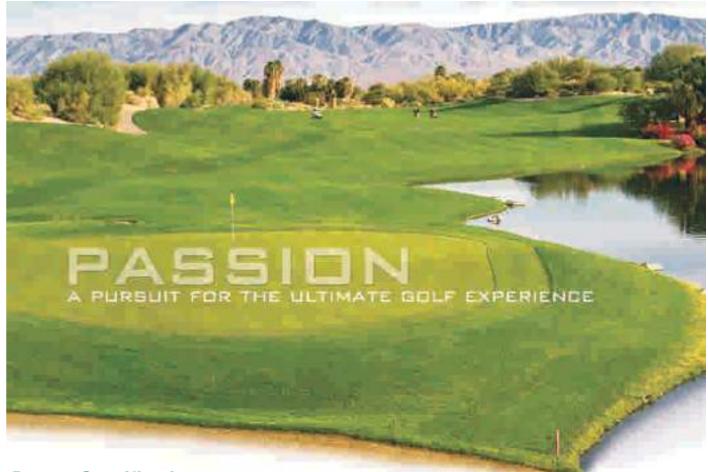

- Very thick positive and negative plates
- Special plate design for improved active mass adhesion and improved conduction
- Innovative separators
- Electrolyte: diluted sulphuric acid
- Casing material: polypropylene
- Special, patented active mass composition

APPLICATION

- Small stackers,
- Lifting platforms,
- E-vehicles, Cleaning machines,
- Golf carts, Etc.

Battery Specification

Model	Voltage	Amp-Hour Rate(Ah)		Capaci	Di	mensio	ons	Weight(kg)		
No.	(V)	5hr	3hr	@25Amp	@75Amp	L	W	Н	Dry	Wet

Note:

A. The number of minutes a battery can deliver when discharged at a constant rate at 80°F (27°C) and maintain a voltage above 1.75 V/cell. Capacities are based on peak performance.

- B. The amount of amp-hours (AH) a battery can deliver when discharged at a constant rate at 30°C (86°F) for the 5-Hour rate and maintain a voltage above 1.75V/cell. Capacities are based on peak performance.
- C. Dimensions are based on maximum size. Dimensions may vary depending on type of handle or terminal.
- D. Dimensions taken from bottom of the battery to the highest point on the battery. Heights may vary depending on type of terminal.
